

WOOD REVIVER GEL

A water based, odourless, biodegradable Gel, that is ideal for restoring all types of grey, weathered, UV damaged wood back to its natural colour.

A powerful fast acting thixotropic Gel offers easy application on both horizontal and vertical surfaces. Supplied with scrubbing brush.

Suitable for rough sawn and smooth outdoor furniture, decking, joinery, fences window frames and sheds.

Preparation:

- Ensure all surfaces are clean, dry, and free from any previous finish.
- Remove any fungal growth, dirt or moss on old wood prior to application.
- Do not pressure wash.
- Avoid contact with any decorative stone and metallic components, particularly aluminium, zinc, copper and lead.
- Plants should also be covered for protection against splashes both during application and rinsing off.
- Keep pets away from all treated surfaces until rinsed and dry.

Application:

- Dampen the wood initially, to aid penetration. Apply generously and consistently using a brush or roller, following the direction of the grain.
- Apply in sections, ensuring that the wood does not dry out as this will inhibit the reaction. Spray water to re-activate if necessary.
- Leave for 20 minutes or until sufficient reaction has occurred.
- Scrub with a hard bristle brush, rinse well and allow to dry completely before re-finishing.
- Always test on a small area prior to initial application.

Coverage: A single application will cover approximately 10sqm per litre depending on density of substrate
